

### Manage Compliance Controls Effectively Through Alerts and Reports

- Compliance controls are effective when a monitoring solution is in place
- Generate compliance reports to evaluate the current posture of your security controls
- Identify potential in-bound threats before a malicious actor has the chance to break your business operations
- Real-time detection from where it counts the most – the data!

- Dataphy’s compliance assessment report monitors controls against assets, users, privileges, applications, and database objects.
- Prioritize violations through tangible and actionable alerts.
- Transactional activities are grouped to give fast reporting capabilities.

The image shows two overlapping screenshots of a Dataphy Compliance Assessment Report (CAR). The main screenshot displays a 'Compliance Summary' for the period July 12th, 2016 00:00:01 to July 12th, 2016 23:59:59. The summary includes: Database instances: 20, Users affected: 364, and Events: 6,356. Below the summary, there are sections for 'Compliance Assets' and 'Compliance Events'. A smaller screenshot on the right shows a 'Summary Report' with a 'Compliance Events' section listing specific database activities such as 'Login', 'Permission Changed', and 'Data Changed' for various users and sessions.
